# Manual Changeover Systems FDR-1 Series

#### **Features**

- Two gas sources are connected to the system, when the pressure of one gas source is lower than the switching pressure, manually switch to the other gas source to ensure continuous gas supply
- With vent valves to relieve residual pressure quickly, easy and safe to remove and replace gas source
- With special cleaning and packaging, applicable to oxygen-enriched atmospheres

#### **Technical Data**

- $\odot$  Maximum inlet pressure: 3000 or 4500 psig
- Outlet pressure range: 0 ~ 25, 0 ~ 50, 0 ~ 100, 0 ~ 250 or 0 ~ 500 psig
- Material of the main components: Seat: PCTFE (regulator and diaphragm valve)
  Diaphragm: Hastelloy (regulator), cobalt alloy (diaphragm valve)
  Diaphragm valve body: 316L SS
  O-ring: FKM
- O Temperature: -10 °F ~ 150 °F (-23 °C ~ 65 °C)
- $\bigcirc$  Valve leak rates (helium): Internal: ≤1×10<sup>-7</sup> std cm<sup>3</sup>/s External: ≤1×10<sup>-9</sup> std cm<sup>3</sup>/s
- $\bigcirc$  Flow coefficient (regulator Cv): 0.06

## **Manual Changeover System FDR-2** Series

#### **Features**

- ◎ Two gas sources are connected to the system, when the pressure of one gas source is lower than the switching pressure, manually switch to the other gas source to ensure continuous gas supply
- O With vent valves to relieve residual pressure quickly, easy and safe to remove and replace gas source
- O With special cleaning and packaging, applicable to oxygen-enriched atmospheres

#### **Technical Data**

- O Maximum inlet pressure: 3000 or 4500 psig
- Outlet pressure range: 0 ~ 750, 0 ~ 1500 or 0 ~ 2500 psig
- O Material of the main components: Seat: PCTFE (regulator and diaphragm valve) Piston: 316L SS Diaphragm: cobalt alloy (diaphragm valve) Diaphragm valve body: 316L SS O-ring: FKM or FFKM Filter: 316L SS
- O Temperature: -10 °F ~ 150 °F (-23 °C ~ 65 °C)
- O Leak rates: Internal: Bubble-tight External: Bubble-tight
- O Flow coefficient (regulator Cv): Without vent: 0.06 Vent: 0.1

# Automatic Changeover System CEPR Series

The CEPR series automatic changeover system, suitable for uninterrupted gas supply, uses dual gas sources of main supply cylinder and backup cylinder. When the pressure of one gas source drops below the set pressure, the changeover system will automatically switch from the depleted source to the backup source, thus achieving a continuous gas supply.

#### **Features**

- Two gas sources are connected to regulators of the automatic changeover system, when the pressure of one gas source is lower than the switching pressure, it will automatically switch to the other gas source to supply gas, thus ensuring continuous gas supply.
- ◎ Excellent sensitivity and set point pressure stability.

#### **Technical Data**

- O Maximum inlet pressure: 3000 psig
- ◎ Nominal changeover pressure: 100, 150, 200 and 250 psig
- Outlet pressure ranges: 85 ~ 115, 135 ~ 165, 185 ~ 215, 235 ~ 265 psig
- Material of the internal components: Seat: PCTFE
  - Diaphragm: Hastelloy Filter: 316L SS
- Working Temperature: -40 °F ~ 165 °F (-40 °C ~ 74 °C)
- ◎ Valve leak rates (helium): Internal: Bubble-tight External: ≤2×10<sup>s</sup> std cm<sup>3</sup>/s
- I Flow coefficient (Cv): 0.06
- Weight:  $\approx$ 5.07 lbs (2.3 kg)

#### **Dimensions**

Dimensions, in inches (millimeters), are for reference only.

#### **Operation Overview**

The CEPR series changeover system consists of two separate regulators. The two regulators are respectively attached to separate source cylinders. One of the regulators has an adjusting handle which can swivel to enable source side selection.

The other regulator is preset to an appropriate setting for the system outlet range. The source selection handle adjusts the outlet pressure to be either above or below the preset side within 15 ~ 30 psig. When the handle is turned to point to the standby side, the standby side continues to supply gas due to the change in differential pressure to achieve continuous and uninterrupted gas supply. When one supply drops below the changeover pressure, the selector regulator automatically switches the gas feed from the depleted supply to an alternate supply.

#### Notes:

- 1. "Ordering Number Description" is a reference to understand the combination rules of FITOK product part number. Not all combinations are available.
- 2. Before ordering, please read User's Guide on A-12.

**Ordering Number Description** 

3. For EB/EM/PSW/PT/FA options, please consult our engineers with specific application details (medium, pressure, flow rate, temperature) for configuration confirmation.

# Automatic Changeover Systems FDR-1L Series

#### **Features**

- ◎ With CEPR series automatic changeover device
- With vent valves to relieve residual pressure quickly, easy and safe to remove and replace gas source
- With special cleaning and packaging, applicable to oxygen-enriched atmospheres

Model: FDR-1L6L-30-10-B-00-00-00

- **Technical Data**
- O Maximum inlet pressure: 3000 or 4500 psig
- Nominal changeover pressure: 100, 150, 200 and 250 psig
- Outlet pressure range: 85 ~ 115, 135 ~ 165, 185 ~ 215 or 235 ~ 265 psig
- Material of the main components: Seat: PCTFE (regulator and diaphragm valve)
  Diaphragm: Hastelloy (regulator), cobalt alloy (diaphragm valve)
  Diaphragm valve body: 316L SS
- O Temperature: -10 °F ~ 150 °F (-23 °C ~ 65 °C)

- ◎ Flow coefficient (regulator Cv): 0.06
- $\bigcirc$  Weight:  $\approx$ 12.1 lbs (5.5 kg)

#### **Flow Schematic**

### **Operation Overview**

The FDR-1L Series Changeover System is mainly comprised of one adjustable outlet pressure regulator together with one fixed outlet pressure regulator.

## When the 2 inlets are both open, the one side that the "IN SERVICE" arrow is pointing at by turning the handle would be the 1st source for gas supply.

Fig. 1 When the "In Service" arrow is pointing at side B, side B would be the gas source. At this time, the fixed outlet pressure of side B is higher than the set pressure of side A. Consequently, the diaphragm of side A regulator moves to enable the stem to close the regulator.

Fig. 2 If side A is chosen as the gas source, the handle should be turned clockwise until the "IN SERVICE" arrow is pointing at side A. At this time, the set pressure of side A is higher than the fixed outlet pressure of side B. Consequently, the diaphragm of side B regulator moves to enable stem to close the regulator.

#### A-95 Changeover Systems

#### When gas source of one side is depleted, gas source would automatically change to the other side.

Fig. 1 When "IN SERVICE" arrow is pointing at side B, but gas source of side B is depleted, its outlet pressure shall decrease to be lower than the set pressure of side A. By the force of spring, side A regulator will be opened to begin gas supply as shown in Fig. 3

Gas from side A will flow back into side B. At this time, replace to a new gas source of side B, close the shutoff valve and open the vent valve to exhaust the remaining pressure, then replace to a new gas source. After the replacement, if not rotating the handle, the gas supply will return to the status as of Fig. 1. And if rotating the handle to the status as shown is Fig. 2, the gas supply will be changed to the status as of Fig. 2.

Fig. 3

2. Before ordering, please read User's Guide on A-12.

# Automatic Changeover Systems DPPR Series

The DPPR series automatic changeover system, suitable for uninterrupted gas supply, uses dual gas sources of main supply cylinder and backup cylinder. When the pressure of one gas source drops below the set pressure, the changeover system will automatically switch from the depleted source to the backup source, thus achieving a continuous gas supply.

#### **Features**

- Two gas sources are connected to regulators of the automatic changeover system, when the pressure of one gas source is lower than the switching pressure, it will automatically switch to the other gas source to supply gas, thus ensuring continuous gas supply.
- Excellent sensitivity and set point pressure stability.

#### **Technical Data**

- O Maximum inlet pressure: 3000 psig
- O Nominal changeover pressures: 250 psig
- Outlet pressure ranges: 0 ~ 25, 0 ~ 50, 0 ~ 100, 0 ~ 150 psig
- Material of the internal components: Seat: PCTFE Diaphragm: Hastelloy Filter: 316L SS
- O Temperature: -40 °F ~ 165 °F (-40 °C ~ 74 °C)
- ◎ Valve leak rates (helium): Internal: Bubble-tight External: ≤2×10<sup>\*</sup> std cm<sup>3</sup>/s
- $\bigcirc$  Flow coefficient (Cv): 0.06
- ◎ Weight:  $\approx$ 5 lbs (2.3 kg)

## Dimensions

Dimensions, in Inches (millimeters), are for reference only.

#### **Operation Overview**

The DPPR series changeover system consists of three pressure regulators, housing two single-stage regulators in a single body and a line regulator. The two single-stage regulators are each attached to separate source cylinders. The adjusting handle can swivel to enable source side selection. The other regulator is preset to an appropriate setting for the system outlet range. The source selection handle adjusts the outlet pressure to be either above or below the preset side within 15 ~ 30 psig. When the handle is turned to point to the standby side, the standby side continues to supply gas due to the change in differential pressure to achieve continuous and uninterrupted gas supply.

When one supply drops below the changeover pressure, the selector regulator automatically switches the gas feed from the depleted supply to an alternate supply. At this time, the main gas cylinder can be changed for continuous uninterrupted gas supply.

#### **Ordering Number Description**

#### **Flow Schematic**

Model: FDR-1T6L-45-150-B-00-00-00

Source A

### **Operation Overview**

The FDR-1T Series Changeover System is mainly comprised of one adjustable outlet pressure regulator and one fixed outlet pressure regulator, together with a line pressure regulator on the outlet port.

When the 2 inlets are both open, the one side that the "IN SERVICE" arrow is pointing at by turning the handle would be the 1st source for gas supply.

Fig. 1 When the "In Service" arrow is pointing at side B, side B would be the gas source. At this time, the fixed outlet pressure of side B is higher than the set pressure of side A. Consequently, the diaphragm of side A regulator moves to enable the stem to close the regulator.

Fig. 2 If side A is chosen as the gas source, the handle should be turned clockwise until the "IN SERVICE" arrow is pointing at side A. At this time, the set pressure of side A is higher than the fixed outlet pressure of side B. Consequently, the diaphragm of side B regulator moves to enable the stem to close the regulator.

Fig. 2

#### A-103 Changeover Systems

#### When gas source of one side is depleted, gas source would automatically change to the other side.

Fig. 3 When "IN SERVICE" arrow is pointing at side B, but gas source of side B is depleted, its outlet pressure shall decrease to be lower than the set pressure of side A. By the force of spring, side A regulator will be opened to begin gas supply.

Gas from side A will flow back into side B. At this time, replace to a new gas source of side B, close the shutoff valve and open the vent valve to exhaust the remaining pressure, then replace to a new gas source. After the replacement, if not rotating the handle, the gas supply will return to the status as of Fig. 1. And if rotating the handle to the status as shown is Fig. 2, the gas supply will be changed to the status as of Fig. 2.
